

STUDENT INFORMATION SYSTEM

A C++ PROGRAM USING LINKED LIST
TO STORE AND MANAGE STUDENT RECORDS

FEATURES:-

Add student

View student

Modify student

Concept used:-

Structures (struct node)

Linked list

Dynamic memory allocation
functions

Node structure:-

stores:

Roll no

Name

Adhaar no

Phone no

Email

Pointer to next node

Add student function:-

Creates new node

Takes input from user

Adds node at end of list

View student function:-

Searches using roll no

Displays student details

If not found → shows message

Modify student function:-

Searches student by roll no

Updates details

Confirms update

Summary:-

Menu-driven student system using linked list in C++

It provides functions like add , view and modify student records

Uses structures , pointers, and dynamic memory allocation
